Experience

DevOps / NetOps

BLD

Feb 2022 - Present (1 year 1 month)

My responsibilities include supporting the company's network services. My work encompasses the following elements:

- Utilizing Python, Ansible, and the "infrastructure as code" approach where appropriate.
- Deploying applications and services using Docker.
- Administering on-premise VMware server infrastructure.
- Administering and troubleshooting network services on Ubuntu and CentOS servers.
- Writing scripts for interacting with various application APIs (Rest, AXL (Cisco), RisPort70 (Cisco)).

Outside of my main work:

As a DevOps Engineer, I established a CI/CD pipeline for delivering and deploying microservice software within the Yandex learning platform. The technology stack used includes Angular (frontend), Spring (backend), Git, Gitlab-CI, Ansible, Terraform, Hashicorp Vault, Docker, NginX, PostgreSQL, MongoDB, Yandex Cloud, and Kubernetes with Helm.

I am currently developing my own web project, using the following technology stack: Django/Html/CSS, PostgreSQL, Gitlab-CI, Docker and Docker-compose, some Cloud Hosting.

Network Engineer / NetOps

Fresenius Medical Care

Jun 2017 - Feb 2022 (4 years 9 months)

I was responsible for the overall operation of the campus LAN, WAN, DMZ/Edge networks and key network services in the company. Some aspects of my work include:

- Utilizing Python scripts and automation tools to streamline routine network administrator tasks.
- Troubleshooting network issues using various techniques, including packet capture, log collection, Netflow and SNMP.
- Performing network security tasks.

As a lead network engineer, I contributed to several high-impact projects, including:

- Implementing DMVPN technology to connect over 100 remote offices, including migrating from old s2s ipsec technology and legacy network equipment
- Deploying a remote AnyConnect VPN using SAML with Microsoft Azure AD for the entire company
- Designing and deploying a highly available data center network
- Migrating to a Zabbix monitoring system using Python automation scripts and improving network visibility.

Network Administrator

RosEuroBank

Oct 2012 - May 2017 (4 years 8 months)

I was responsible for supporting the bank's network infrastructure and all its branches, including the support of critical business network services and segments, such as the interaction segment with trading platforms, processing providers, and DMZ. The total number of bank employees was around 1000 people. Below is a list of some of the tasks and projects that I was involved in:

- Establishing secure VPN connections to remote branches through implementation of DMVPN and s2s ipsec technologies.
- Implementing routing configurations using the EIGRP protocol.
- Ensuring network security through the implementation of firewall, IPS, and IDS policies.
- Maintaining the stability and performance of the data center network, which consisted of Cisco Nexus 1000v, 5000, and 4000i BC switches.
- Troubleshooting network connectivity issues to maintain seamless operation.
- Continuously monitoring network performance using industry-standard tools like Zabbix and Netflow to ensure optimal network utilization.
- Participating in major network deployment projects, including the implementation of DMVPN for branch connectivity, the deployment of network infrastructure at the Backup Data Center, and interconnecting the ATM/POS network with the payment processing provider.

Network Administrator

Morton

Apr 2010 - Oct 2012 (2 years 7 months)

As a network administrator, I carried out various tasks on a regular basis, including establishing VPN connections to branch offices with IPsec and GRE tunnels, configuring dynamic routing, implementing traffic filtering through ACLs, resolving network connectivity issues, managing and configuring Cisco routers and Catalyst switches, and keeping network infrastructure documentation up to date.

Education

Volga State University of Telecommunications and Informatics

Engineer's degree, Computer Systems Networking and Telecommunications
2003 - 2008

Licenses & Certifications

Installation, Commissioning and Maintenance of Huawei Core Network CS -
Huawei

Y DevOps - Yandex

Skills

Git • VMWare ESXi • Domain Name System (DNS) • Linux • Cisco Networking • Dynamic Multipoint Virtual Private Network (DMVPN) • Zabbix • Lunix • Kubernetes • Docker Products
